#### Features

The GE Simon XT control panel is a full-feature home security platform that delivers years of dependable and secure protection. Featuring advanced wireless technology, Simon XT provides the newest state-of-the-art technology. Complementing the GE Simon XT is the new Two-Way Talking Touch Screen. Working Simon XT and Advanced Interactive Services, this new touch screen offers set up control for many items in your home, can provide weather conditions for your area, and works seamlessly with the Web Portal and mobile applications for remote access and control. The GSM Module for Simon XT can be used as the primary means of communication (no phone line required)

or as a backup to a landline phone connection. It supports full alarm reporting to TWR's Central Station.

#### Camera Details

Including a weatherproof, day/night indoor/outdoor IP camera is designed specifically to work with this security system, which provides a professional surveillance solution without the complexity of traditional CCTV systems. High-quality Live and Recorded video are available to customers through web-enabled computers, cellphone web browsers or via free downloadable apps for iPhone, Blackberry and Android devices.

#### No Separate Power Supply Needed

The GSM Module does not require its own battery or transformer. It runs on the control panel's AC power and backup battery sources and can function reliably for 24+ hours during a power outage.

#### Remote Monitoring & Control via Web/PDA/Cell

The web interface is simple and allows system access at any time, from any location. Online features include current arming state and zone status, remote arm/disarm commands, panel user code programming, and email and text message alert configuration for alarms and "custom threat" events defined by the user. (Features vary depending on service plan.)
